

Add 16 parts starch and fully combine until smooth. Shelf life of this deodorant cream is 1 to 2 days without refrigeration. Visual instructions are provided showing the steps involved from attracting mosquitoes, through the cooking and mixing process, to applying the deodorant and the mosquitoes flying away.

Our novel starch hydrogel provides an effective topical to prevent body odor (carboxylic acid) that would otherwise attract mosquitoes to humans. Open source outside the US, protected by US patent 11,118,032, this deodorant may be prepared at home with a starchy vegetable or plant, some water, a cooking fire and the following instructions. Combine 12 parts water and 1 part starch. Cook on low heat until thickened and transparent, then remove from heat and allow to cool.
